

Turf Micro Mn 13%

A soluble powder formulation of *manganese EDTA chelate* (ethylene diamine tetraacetate disodium salt) containing water soluble Mn of 13% w/w.

USES

1. Foliar or soil application for correction of iron deficiency in agricultural, horticultural, turf and fruit crops.
2. As a magnesium source in hydroponics and other nutrient solutions.
3. **Turf Micro Mn 13%** (*maganese chelate*) should be applied where there is a recognised need. Do not exceed the appropriate dose rate.
4. It is compatible with all other **Turf Micro** chelates and many crop care chemicals. They are also fully compatible with solutions containing soluble phosphates such as liquid feeds and foliar fertiliser.

Rates of application:

HYDROPONICS

First check the pH of the nutrient solution & if necessary adjust pH to 5-6, then add **Turf Micro Mn 13%** at the rate of 20 grams per 1000 litres of the nutrient solution.

SOIL APPLICATION

Dissolve the appropriate amount of **Turf Micro Mn 13%** in a convenient volume of water (1-3 kilograms per hectare or 100 grams per 18 litres water sprayer) and apply to the soil as coarse, low pressure spray.

Repeat once a month.

FOLIAR APPLICATION

The amount of **Turf Micro Mn 13%** to be applied should be mixed with a volume of water appropriate to the leaf area not exceeding a solution concentration of 0.1% or 100 grams per 100 litres water. Coat the leaves and stems with a thin film of moisture with little or no run-off and in early morning or late afternoon.

Repeat once a month for normal maintenance & every 14 days for curative treatment.
